

AD Enum using Legacy tools

Note: → use RDP as much as possible

Enum tools on powershell
✗ WinRM doesn't work.

Kerberos Double Hop

Even after using Rdp we need
Some privilege to work and
Enum, See Remote
Access via RDP on
admin section

⇒ Consider
This too

\$ → Net user /domain

→ prefix & suffix

→ should give us some
idea about account holder

and user specific privilege

\$ → Net group /domain

→ groups in domain

→ Some of them are builtin
△ Some of them are created

\$ → Net group "Sales Department"
/domain

→ Enumerating a specific group
and its members-

→ These small bits of info
create a large structure to
use this against the organization

→ What we are doing here is
a very repetative and cyclical thing
So there are tools which are
being used to do automatic this
stuff
